This compiler and the Arduino-library is licensed under the GNU General Public License. It is available for download at and for Mac OS X and Windows at We have received many questions about the Arduino-Compatible Compiler for LabVIEW, but we've only been able to respond to a few of them so far. So, we thought we would take some time and write this article to explain the purpose and uses of this software, and to address some of the most common questions that users have asked about it. What is the Arduino-Compatible Compiler for LabVIEW and how does it work? Arduino-Compatible Compiler for LabVIEW is a software that can be used to compile LabVIEW programs to target the Arduino™ microcontroller. It's purpose is to provide a means of reusing code, and to make it easier to create custom Arduino-based hardware using the Arduino IDE™. What do you mean by "compiler"? A LabVIEW compiler is a set of tools that transform the LabVIEW code into a form that can be run on a microcontroller such as the Arduino™. Like many programming tools, they can be used to create code in a number of different languages including LabVIEW, C, and a variety of scripting languages. The Arduino-Compatible Compiler for LabVIEW is a tool that converts LabVIEW code into a format that can be compiled to run on the Arduino™. Why is the Arduino-Compatible Compiler for LabVIEW different from the Arduino IDE? Many people assume that the Arduino IDE is a program that can be used to compile code to the Arduino hardware, but this is not actually true. The Arduino IDE is primarily a development environment that is based on the standard C programming language. This means that it can be used to create software applications in C, which are then compiled into code that can be run on the Arduino hardware. The Arduino-Compatible Compiler for LabVIEW is a standalone software package that is designed specifically to compile LabVIEW programs to the Arduino. It can be used as a stand-alone software application, and the output can then be used as input to the Arduino IDE. How does the Arduino- 82157476af
